Shift Log & Reporting System
Overview

Manufacturers are continuously looking for ways to control, improve, which simplify production tracking and analyses throughout their plant.

Shift Log & Reporting System is a lean tool for tracking and reporting shift performance, compliance/inspection items and production interruptions. Managers, Supervisors and Team Leaders can access a complete set of reports give users the information they need for trouble-shooting problems, analyzing productivity and performance by business unit, shift and equipment.

Accurate and timely production logging is key to the real-time management decision making process. With Shift Log Reports you will have the information needed to improve productivity, organization and reduce downtime for every shift.

Standardize, sustain SQDCM and 5s throughout your plant. Make business decisions based on information gathered from Team Leader, Supervisor and automated Machine logging. Machine logging is augmented through a Root Cause, Sub Root Cause and Description requirement from the Team Leader. Address problems as they occur and capture potential problems before they impact production.
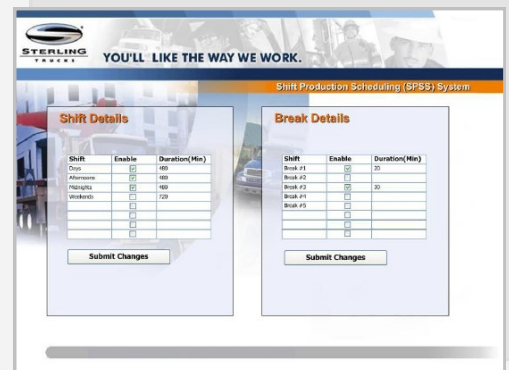

At a Glance

- Provides a Real-Time view of business issues and success
- *Remove double & triple entry of information between Team Leaders, Supervisors and Managers*
- *Ensures compliance logs are completed on time*

Key Benefits

- *Reduce equipment downtime, cycle time and labour costs*
