

Web Portal

Overview

Generating profit, improving production and reducing cost are what we all strive for. Businesses must increase agility to rapidly respond to changing business conditions.

A web portal, or simply called a portal, is a secured area that gives employees in a company the ability to organize information, readily access that information from multiple sources, manage documents, share calendars and enable efficient communication and collaboration, all in a familiar, browser-based environment.

It creates a common, central location for companies to communicate diverse information efficiently to all employees.

In today's fast-paced global marketplace, ability to give co-workers, colleagues and aspiring business partners vital information and data as they require for sound decision-making has become extremely important for businesses striving to be productive and profitable.

They can not only gain critical production information but can then securely share it with other distinctive colleagues and take action to improve their bottom line - all the time recording in a compliant repository the changes that could affect their operation.

Key Benefits

- *Schedule meetings and sharing calendars with employees and partnering companies*
- *Maintaining contact directories of all your employees, suppliers and customers*
- *Managing and delegating project tasks*
- *Conduct opinion polls among your employees*
- *Produce useful charts and graphs*
- *Posting HR Job Announcements and HR Benefits*

Why IES Group?

IES Group has over a decade of experience implementing complex software modeling & reporting systems empowering quick real time information based decisions.

At a Glance

- *Fast delivery of content & up to date features*
- *Eliminates the need for individually installed applications throughout the company*
- *Streamline Communications*
